Network & Application Delivery Engineer

Description

We are looking for a Network & Application Delivery Engineer with hands-on experience in load balancing, API gateway administration, and network infrastructure.

Working model: Hybrid — 2 days per week in the office.

Key Responsibilities

- Configure and maintain load balancing platforms, including F5 and Citrix NetScaler, and API gateways.
- Manage DNS services and SSL/TLS certificates.
- Support network infrastructure deployment and configuration.
- Investigate incidents, identify root causes, and proactively assess operational risks.
- Prepare technical analyses, implementation plans, and documentation.

Required Qualifications

- 2–5 years of experience in load balancing and API gateway administration.
- Strong understanding of TCP/IP, ports, and network protocols.
- Hands-on experience in network infrastructure setup.
- Experience managing DNS services and SSL/TLS certificates.
- Strong analytical, troubleshooting, planning, and documentation skills.
